PROFILE

Gothenburg-based integration engineer with five years of experience building the integrations and APIs that let enterprise systems talk to each other. I work across MuleSoft and AWS, and own the DevOps side — CI/CD pipelines and automated deployments — with a strong focus on reliability. Delivered integration solutions for clients in automotive and manufacturing, including Polestar, CTEK and Koenigsegg, connecting platforms such as Salesforce, Shopify, Workday and Amazon.

EXPERIENCE

Integration Engineer

Oct 2021 – Present

Blohmsoft · Gothenburg

Integration consultant building and maintaining APIs and integration platforms for enterprise clients, from design and development through deployment and operations.

MuleSoft integrations — Polestar, CTEK

- Worked across the full MuleSoft platform — API design, integration flows, data transformations and security, including OAuth implementation.
- Worked in client teams on new integrations, change requests and long-term maintenance.

AWS integration platform — AION Auto UK, AD Bildelar, Koenigsegg and more

- Built an integration platform on AWS (Lambda, SQS, S3, DynamoDB and more), written as code with the AWS CDK, that serves multiple clients from one shared foundation.
- Developed integrations in Java, TypeScript and Python on top of the platform.

DevOps & operations

- Set up and maintained CI/CD pipelines and automated deployments across projects.
- Responsible for the stability of integrations in production — monitoring, troubleshooting and fixes.
